# ProsgreSQL Activity

Description: Returning to the previous example, perform the following activities

a) Add <u>your name</u> in table **artist** as the third row/tuple.

b) Add your favorite song, <u>all in upper case</u>, as the third tuple in table album. Remember that it links to the third tuple in artist table.
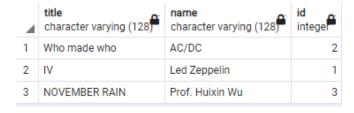

artist table

	id [PK] integer	name character varying (128)
1	1	Led Zeppelin
2	2	AC/DC
3	3	Prof. Huixin Wu

album table

	id [PK] integer	title character varying (128)	artist_id integer
1	1	Who made who	2
2	2	IV	1
3	3	NOVEMBER RAIN	3

Display a join table between **artist** and **album**: display the column of **title** from album table, **name** from artist table, and artist **id** number:

Join display between artist and album

	title character varying (128)	name character varying (128)	id integer
1	Who made who	AC/DC	2
2	IV	Led Zeppelin	1
3	NOVEMBER RAIN	Prof. Huixin Wu	3

c) Display a join table between **track** and **genre** table: display the column of **title** from the track table and **name** from the genre table:

Data Output   Explain   Messages   Notificatic

	title character varying (128)	name character varying (128)
1	Black Dog	Rock
2	Stairway	Rock
3	About to Rock	Metal
4	Who MAde who	Metal
